

To whom it may concern:

I have been Kristiyan Garchev's student counsellor at the Math and Science High School "Acad. S. Koroliov" (MSS) in Blagoevgrad since he was in fifth grade. After demonstrating excellent results in a series of contests, he qualified second for the only class at our school, available for his age group. After the matriculation exam at the end of the 7th grade, he chose to continue his education at our school.

For the eight years I have known him, he has proven to be exceptionally inquisitive and hard working. All teachers recognize him for his impeccable attitude towards his mentors and schoolmates. He eagerly helps fellow students from different age groups in their studies.

With his wide range of interests and courage to never back down when facing a challenge, he actively participates in competitions and Olympiads from the program of the Ministry of Education and Science (MES) along with competitions organized by other institutions. In the 2020/2021 school year, Kristiyan was unanimously elected to be the head of the student council, which has many privileges, including the honor to be the carrier of the flag of the school during official ceremonies. He takes part and represents himself and the school in many compulsory and extracurricular activities and events such as the annual School of the Year inter-school competition. There, students from all over the city compete in a series of both academic and artistic disciplines. He has won engineering drawing competitions and takes part in the school music a band.

I am convinced that with his set of skills he would be an exceptional addition to your university. Therefore, I recommend looking thoroughly through his application to see for yourselves that he is not only sedulous, creative, and cooperative, but he also stands out among all the other applicants.
